

KaariGhar

Find the right help, effortlessly.

A mobile application that helps people find and book trusted home service professionals — electricians, plumbers, carpenters, and cleaners — built to replace word-of-mouth with a faster, more reliable process.

→PROBLEMS

People often struggle to find reliable home service providers. Traditional methods rely on personal recommendations, which can be slow and unreliable. There is also no simple way to manage bookings or track service requests.

→GOALS

Design an app that lets users.

- Find service providers
- Book services easily
- Track booking status
- Make secure payment

→TARGET USERS

01 Homeowners	02 Working Professionals	03 Students Living Independently	04 Families
------------------	-----------------------------	-------------------------------------	----------------

→KEY INSIGHTS

Based on common expectations for service-booking platforms, I identified several features that would improve the user experience:

- **Service Categories** – Help users quickly find the service they need.
- **Provider Ratings & Reviews** – Build trust and help users choose reliable professionals.
- **Booking Tracking** – Allow users to monitor the status of their service request.
- **Provider Dashboard** – Enable service providers to view:

WHY THIS FEATURES

- Categories reduce the time needed to find a service.
- Ratings increase confidence in choosing a provider.
- Booking tracking keeps users informed throughout the process.
- The dashboard helps providers monitor their performance and business growth.

→FINAL UI

→PROTOTYPE

An interactive Figma prototype was created to connect the final UI screens and demonstrate the complete user journey, from discovering a service to booking and payment.

[View Interactive Prototype →](#)

→DESIGN SYSTEM

A 60-30-10 palette — white for space, charcoal for structure, gold for the one action that matters on each screen

→CHALLENGES AND DESIGN DECISION

Challenges

The main challenges were organizing multiple service categories without overwhelming users, keeping the booking process simple and easy to follow, and presenting provider information clearly so users could make informed decisions.

Decision Outcomes

To address these challenges, I used a clean interface with minimal distractions, grouped services into clear categories for easier navigation, and designed a step-by-step booking process. Consistent UI components and visual patterns were used throughout the app to improve usability and create a cohesive experience.

→WHAT I LEARNED

- How to design a complete mobile application in Figma.
- How user flows improve navigation and usability.
- How thoughtful design can simplify everyday tasks.
- The importance of consistency in UI design.
- How to create interactive prototypes.
