

Royal Rhino Riders

Connecting riders through community.

A responsive website redesign for Royal Rhino Riders (RRR), a motorcycle community focused on group rides, social activities, charity programs, skill development, and community engagement.

ROLE

UI/UX Designer

TOOL

Figma

PROJECT TYPE

Website Redesign

→PROBLEMS

The existing website contained important information about Royal Rhino Riders, but the content and visual presentation could be improved to create a clearer and more engaging experience for visitors.

→TARGET USERS

01
Motorcycle Enthusiasts

02
Existing Riders

03
Potential Members

04
Community Supporters

→KEY INSIGHTS

During the redesign, I focused on improving the way users discover and understand the organization.

- **Clear First Impression** – The homepage should immediately communicate what Royal Rhino Riders is about.
- **Content Hierarchy** – Important information should be structured into clear sections so users can quickly scan the page.
- **Easy Engagement** – Important actions such as Join Us, Register, and Contact should be clearly visible.
- **Visual Storytelling** – Real photography from rides and events helps communicate the community's identity and authenticity.

→FINAL UI

→GOALS

The goal of the redesign was to:

- Improve the overall visual hierarchy.
- Create a clearer and more structured layout.
- Showcase the organization's activities and programs.
- Strengthen the motorcycle community's visual identity.

WHY THIS FEATURES

- **Clear First Impression** – Immediately communicate who Royal Rhino Riders are and what they do.
- **Content Hierarchy** – Organize information into clear sections for easy scanning.
- **Easy Engagement** – Make actions like Join Us, Register, and Contact easy to find.
- **Visual Storytelling** – Use real event photography to showcase the community's identity and authenticity.

Existing Royal Rhino Riders Website

Redesigned Royal Rhino Riders Website

→ Key Improvements

1. **Visual Hierarchy** → Created a clearer content structure for easier scanning and navigation.
2. **Content Organization** → Organized programmes, activities, and information into structured sections.
3. **Visual Identity** → Introduced a stronger and more consistent visual style.
4. **User Engagement** → Made key actions such as Join Us, Register, and Contact more visible.
5. **Visual Storytelling** → Used real community and event photography to create a more engaging experience.

→PROTOTYPE

An interactive prototype was created in Figma to demonstrate the website's navigation and overall user journey.

The prototype allows users to explore the main sections of the website, including the organization's introduction, about section, programs, events, and contact area.

[View Interactive Prototype →](#)

→DESIGN SYSTEM

A 60-30-10 palette – white for space, #2D0804 for structure, 007FFF for the one action that matters on each screen

→CHALLENGES AND DESIGN DECISION

Challenges

The main challenges were presenting a large amount of organizational information without making the website feel overwhelming, creating a strong motorcycle-focused visual identity, and organizing different activities and programmes into a clear structure.

Another challenge was balancing visual storytelling with usability, ensuring that large images and bold sections did not distract users from important information and actions.

Decision Outcomes

To address these challenges, I created a clear navigation structure for quick access to important sections and used a strong hero section to immediately communicate the organization's identity. I grouped the organization's core values into three simple sections, used programme cards to make activities easy to scan, and added real event photography to create authenticity and strengthen the sense of community. Clear CTA buttons such as Join Us and Register encourage user engagement, while a dedicated contact form provides visitors with a direct communication channel.

→WHAT I LEARNED

- How to approach the redesign of an existing website.
- How to identify opportunities to improve visual hierarchy and information architecture.
- How to preserve an existing brand identity while introducing a modern visual direction.
- How to organize content for better user scanning and navigation.
- How to use real-world content and imagery to strengthen visual storytelling.
- How to design a responsive website with a consistent UI system.
